Note: For some counties the number of individuals who self-identify Pacific Islander (PI) during vaccination is higher than the projected population from the California Department of Finance or U.S. Census. There may be multiple reasons for this and may include, but not limited to, an under-estimation of the PI population or more people may now self-identify PI than when the population projection was calculated.

Note: For some counties the number of individuals who self-identify Pacific Islander (PI) during vaccination is higher than the projected population from the California Department of Finance or U.S. Census. There may be multiple reasons for this and may include, but not limited to, an under-estimation of the PI population or more people may now self-identify PI than when the population projection was calculated.

Note: For some counties the number of individuals who self-identify Pacific Islander (PI) during vaccination is higher than the projected population from the California Department of Finance or U.S. Census. There may be multiple reasons for this and may include, but not limited to, an under-estimation of the PI population or more people may now self-identify PI than when the population projection was calculated.

Source: California COVID-19 Vaccine Progress Dashboard Data

Note: Starting 5/23/2021 we started using population numbers over the age of 12 and switched data sources

Note: For some counties the number of individuals who self-identify Pacific Islander (PI) during vaccination is higher than the projected population from the California Department of Finance or U.S. Census. There may be multiple reasons for this and may include, but not limited to, an under-estimation of the PI population or more people may now self-identify PI than when the population projection was calculated.
